THOK E-Bikes launches TK01 R
The ultimate E-Enduro of the TK01 family is here

The TK01 family of THOK E-Bikes now has a new, accessory-rich model, made for the most radical E-Enduro fans: the new TK01 R.

The TK01 R features the same frame as the TK01 already in the THOK range, made in light 6061 aluminum alloy with T4 T6 heat treatment, with hydroformed parts, CNC machining and integrated cables. Its geometry follows the principles of the TCG Plus (THOK Control Geometry Plus), with an elongated, sloping top tube, tapered head tube 1.8, lowered standover, 64.5° steering angle and 75.5° seat tube angle.

These performance-oriented geometrical solutions are combined with high-end components and the very best technological innovations currently on the market.

PERFORMANCE AND INNOVATION

Special attention was paid to finding the right suspensions, because riders must feel comfortable and enjoy themselves even when trails become much more challenging. Hence, the new RockShox ZEB suspension fork with a 170 mm travel and 38 mm stanchions. This fork, combined with the PFE (Precise Front End), improves the general performances of the e-MTB, starting from its maximum riding precision, thanks to the greater rigidity and effectiveness of the braking system. The rear shock THOK chose is the innovative RockShox Super Deluxe Select+ RT with Debonair Technology and 170 mm travel. It can be completely blocked and guarantees consistent and reliable performances for the entire riding experience.

Also for its new TK01 R, THOK has opted for the best technology available, the cutting-edge Shimano EP8, one of the lightest motors on the market, with its 85 Nm maximum torque, 36% attrition reduction, smooth and natural output. It is completely customisable through its two dedicated Apps (E-TUBE Project and E-TUBE Ride), which allow you to save two different user profiles.
Its low centre of gravity, one of THOK's signature features, is ensured by the integrated 630 Wh battery on the down tube, specifically verticalised to position it close to the motor.

The new TK01 R features SHIMANO XT 4-piston brakes with 203 mm discs and SHIMANO XT 12 speed gearshift with 10-51 cassette. This choice offers the widest range of trail options, regardless of slopes and height differences.
The TK01 R has T-Wings mudguard fins and the gritty *RedFire-Black* livery by Aldo Drudi that make it unique and recognisable.

CUSTOMISATION
Customised specifically for each owner, the new E-Enduro by THOK is delivered with a customised frame with the THOKer's name and information on the setting parameters based on the type of riding desired. To set these parameters, and since THOK is committed to constantly improving its customer care, every customer purchasing a TK01 R will be contacted directly by the THOK head office for specific advice on suspension settings and tyre pressure.
Last but not least, the new TK01 R is delivered along with the THOKcare, which includes two additional years of standard guarantee, the THOKer Box and free shipping anywhere.

The TK01 R is ready for immediate delivery and can only be ordered online (comfortably from home or with the assistance of a THOK Point).
Available in sizes S-M-L-XL, for 6,490 € VAT included.

TK01 R key features:

- E-Enduro with TOP components
- Ready for delivery
- RockShox ZEB suspension fork – 38 mm upper tubes – 170 mm travel
- RockShox Super Deluxe Select+ RT rear shock – 170 mm travel – Debonair Technology
- EP8 motor with integrated 360Wh battery, customisable through the App
- SHIMANO XT brakes and transmission
- Wheels with differentiated diameter: 29" front / 27.5" rear

For all set-up specs, please consult the attached technical sheet
